KEY FEATURES

Future-gen infrastructure monitoring

KYBIO is a powerful monitoring and operation support software which gives industrials the power to capture and mine data from their connected machines and devices.

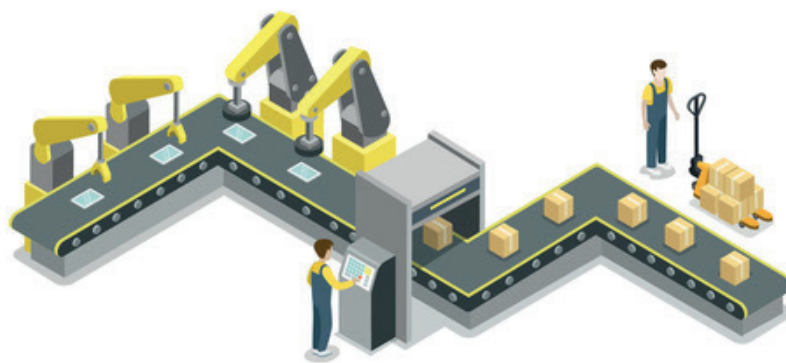

Our infrastructure monitoring solution enables leading industrials to oversee the real-time status and performance of their smart devices, buildings, and ecosystems. Highly scalable and built with a unique combination of modules, it enables the end-to-end management of entire technical environments regardless of their size or complexity.

KYBIO provides alarms, notifications and reports to the appropriate team members and facilitates the detection, follow-up and resolution of incidents.

Its simple and modern user interface enables data-driven decisions and proactive actions to secure maximal equipment performance.

Leveraging its powerful auto-discovery feature and its self-configuration engine coupled with a large library of built-in drivers, KYBIO is the fastest infrastructure monitoring solution to deploy.

SIMPLE. POWERFUL. SCALABLE.

EdgeBots

SIMPLE TO OPERATE

VISUALIZE THE STATUS OF EACH EQUIPMENT VIA THE DYNAMIC MAP & DIAGRAM

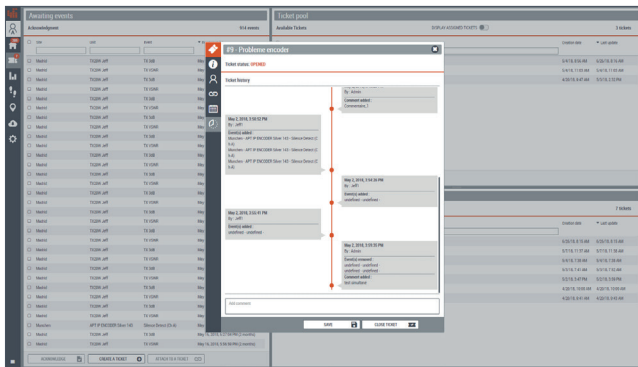

High-level dashboard indicating the status of each site or facility

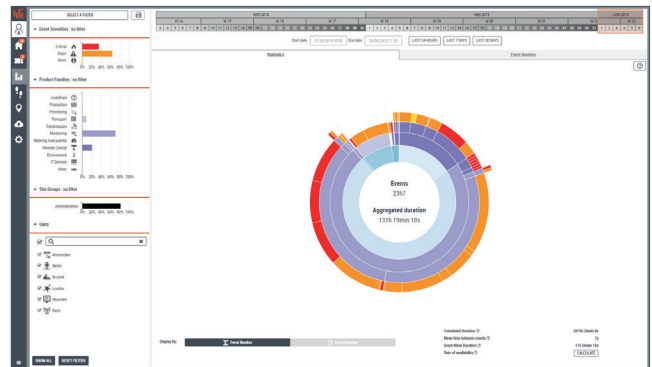

Diving into a site to explore the status of its equipment

TICKET & INCIDENT TRACKING COUPLED TO A VISUAL REPORTING ENGINE

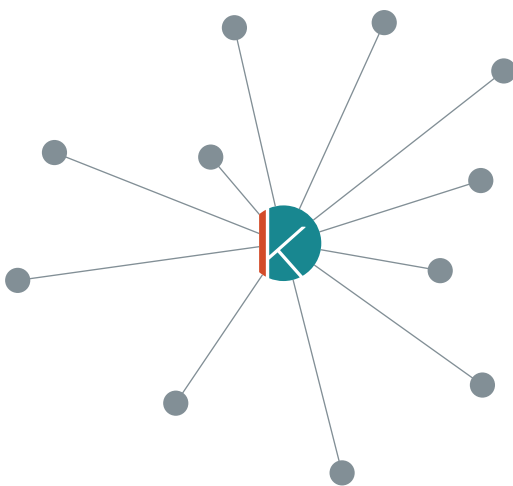

Manage tickets & user assignments. Track operational responses.

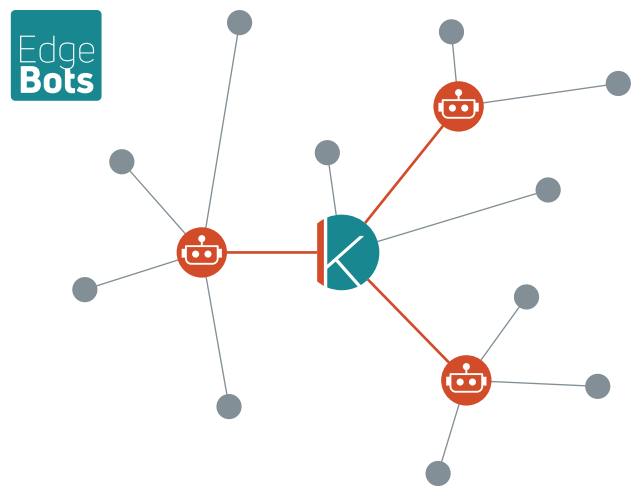

Build, save & share insightful reports and details of alarms or readings

HIGHLY SCALABLE & REDUNDANT ARCHITECTURE

Centralized deployment

Grid deployment with EdgeBots for decentralized monitoring & management

LARGE DRIVER LIBRARY

OPEN DRIVER POLICY

Can't find the integration driver you need in our existing library?
Send us your equipment documentation & let us build the driver for you!

The driver creation service is complimentary with any support contract at the project startup (subject to technical feasibility). It remains free of charge with the Premium Support contract throughout the product operation.

SIMPLE TO ADMINISTRATE

Locate and identify your sites

AUTO-CONFIGURATION ENGINE

KYBIO is the easiest enterprise-grade infrastructure monitoring platform to deploy. Its Auto-Configuration Engine guarantees a very fast and swift startup. It fully automates the equipment discovery and provides a fully graphical user interface for the administration of the platform in a few simple clicks.

OPEN IT ARCHITECTURE

KYBIO can be installed on any type of physical and virtual server that matches your specifications. It can be run on-premises, in the cloud or in a hybrid environment.

ORDER INFORMATION

TWO EDITIONS AVAILABLE

Standard Edition: Up to 25 / 50 / 100 / 250 / 500 / 1000 / 2500 monitored devices. Optional add-ons are available to enable additional functionality.

Enterprise Edition: Designed for large and complex deployments, it supports an unlimited number of monitored devices.

The Enterprise Edition is supplied by default with all available add-ons for an optimum experience.

LICENSING

Perpetual License: One-off license purchase with annual recurring support fee.

Annual Subscription: Yearly subscription fee covering the license rental and support with a 3-year minimum commitment.

Additional professional services can be purchased to assist with the installation and configuration of the platform as well as training.

SUPPORT

Two levels of support contract are available:

Standard support with hotline during office hours

Premium support with a 24/7 hotline

Both support levels provide access to software updates as well as all our online resources (Documentation, Connect Academy & CRM portal).

A 3-year support contract is included with all proposals. An upfront 5-year commitment will unlock additional discounts.
